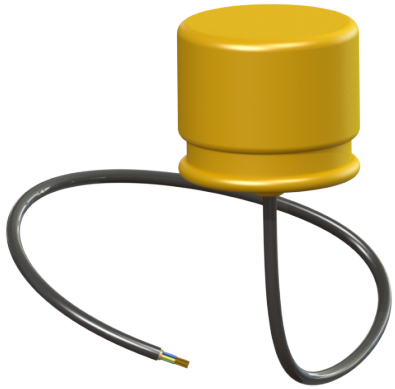
RedWave

multiuser underwater navigation
RedNODE device



DESCRIPTION:

RedNODE is an acoustic navigation receiver. Like the GNSS receiver, it calculates its absolute geographic position, depth, and temperature.

Operating the RedNODE in many ways similar to the work with GPS/GLONASS receiver, but instead of GNSS satellites, it needs four RedBASE sonobuoys deployed that allow an unlimited number of RedNODE receivers to function at the same time and at the same place.

Small size, low power consumption and ease of use make RedNODE an ideal solution for mini-ROVs and AUVs and for work-class ROVs.

GPS/GLONASS emulation makes RedNODE integration into its own systems and devices extremely simple.

KEY FEATURES:

- Completely acoustically passive device
- 3D-position in absolute geographic coordinates (WGS-84)
- Simultaneous positioning for an unlimited number of RedNODE receivers
- Small dimensions
- Acoustic range up to 3000 m
- Reliable and noise-immune technology of digital broadband acoustic communication
- Position update rate up to 1 Hz
- Low power consumption, 5V 70 mA
- GPS/GLONASS receiver emulation (NMEA 0183 GGA, RMC, MTW)
- 300 m depth rating
